
Hackathon submission — field-by-field answers

Two forms to fill for the oG APAC Hackathon submission:

1. Google Form — “oG Project Registration / 项目登记” (pre-submission, do first)

- `https://docs.google.com/forms/d/e/1FAIpQLSdTlwJ8ymBznzv9RiBEz8zBoCRHsUdiCjdu7QilQrpzkzfmjIg/viewform`

2. HackQuest — Submit Project (final submission, gated on demo video + X post)

- `https://hackquest.io/hackathon/57e543a9-0b08-4ba3-8326-e5cd751c0248/<project-id>/submit`

This doc is the single source of truth for what to paste into each field. Update it if any answer changes (e.g., if a contract redeploys or the X post URL lands).

Form 1 — Google Form (no gates, do NOW)

#	Field	Value
1	Email checkbox	✓ Record stephensookra@gmail.com
2	Telegram / WeChat	@stephensookra
3	Country / region	United States (pre-filled)
4	Your Project Name	Compass
5	What's Your Demo? (URL)	https://app-psi- pied.vercel.app
6	Project Build Progress	100%
7	Hackathon Stage	Live & Deployed / 正式上线
8	Submitted demo before CheckPoint?	No
9	oG components used (multi-select)	✓ oG Storage · ✓ oG Compute · ✓ oG Chain · ✓ Agentic ID (ERC-7857) · ✓ TEE / Private Sandbox
10	oG AI workflow tooling (multi-select)	✓ oG AI Context for Coding Assistants (CLAUDE.md / LLM context reference)
11	oG SDKs / Starter Kits (multi-select)	✓ 0glabs/0g-ts-sdk (TypeScript Storage SDK) · ✓ Deployment Scripts (Hardhat / Foundry / Truffle)
12	Track interest (multi-select)	✓ Track 5: Privacy & Sovereign Infrastructure (primary) · ✓ Track 1: Agentic Infrastructure & OpenClaw Lab
13	Biggest bottleneck (multi-select)	✓ Market Validation — Finding real users · ✓ Growth — Need BD / distribution help
14	Team Size	Solo
15	Need to form a team?	No

#	Field	Value
16	Joined oG APAC community? (multi-select)	✓ oG APAC Dev Telegram (<code>t.me/zerog_apac_dev</code>)
17	Schedule 1:1 sync for demo	Yes
18	BEYOND Expo 2026 Macau May 28 IRL	Yes — attending in-person for Compass demo showcase
19	Technical feedback (optional)	(paste below)

Q19 — Technical feedback paste

Aristotle mainnet RPC reliable. Cross-chain swap via hub.0g.ai TokenFlight (Hyperstream/Khalani) worked end-to-end, but US-based funding is rough — none of the four CEXes OG recommends (Bitget/MEXC/Bybit/KuCoin) accept US KYC; Kraken only lists OGN not OG; Coinbase no listing. The only workable path I found: MoonPay \$20 → ETH on Ethereum L1 → MetaMask → hub.0g.ai TokenFlight → native OG on Aristotle. An official US-friendly OG buying path (or a hackathon-only credit for US builders) would unblock more APAC-track US entries. ERC-7857 reference impl would speed adoption; I stripped to a minimal soulbound INFT. Phala dstack TDX integration was smooth — per-receipt RA-quote binding works well.

Form 2 — HackQuest Submit Project (GATED, do after F.1 + F.5)

Two gates before this form is fillable

- Create Compass project entry on HackQuest first.** The URL currently shows `/null/submit` — the “Select the Project to Submit” dropdown is empty because no project is registered against your HackQuest account. Look for “My Projects” → “Create Project” / “Register Project” in HackQuest dashboard before this submit form will work.
- F.5 Project X Post Link is required** — cannot submit HackQuest until the X post is live. F.5 itself depends on F.1 demo video URL. Sequence:

F.1 record demo (Demo/script.md) → upload YouTube unlisted → DEMO_VIDEO_URL
 ↓
 F.5 post X tweet (Demo/x-post-final.md) → X_POST_URL
 ↓
 HackQuest Submit Project (paste DEMO_VIDEO_URL into project entry, X_POST_URL into form)

Field-by-field

#	Field	Value
1	Select the Project to Submit	Compass (after creating the entry on HackQuest)
2	Contract address	0xe42fd4F0a3197126fEeF5e6AAfC5Fb8848bBC58b (CompassHub — Aristotle mainnet entry point, chainId 16661). If the field accepts multiple/comma: also include AgentRegistry 0xf1FAaBef1d00Db1a15b7637Dc0d8526449D06Bf9
3	Prize Track (multi-select)	✓ Grand Prizes · ✓ Excellence Awards · ✓ Community Awards
4	oG Components (multi-select)	✓ oG Storage · ✓ oG Chain · ✓ oG Compute · ✓ Agent ID · ✓ Privacy / Secure Execution
5	oG On-Chain Integration Proof (300 char)	(paste below)
6	GitHub Repository Link	https://github.com/StephenSook/Compass-OG-
7	Project X Post Link	(paste from F.5 once the X post is live)

Q5 — oG On-Chain Integration Proof paste (under 300 chars)

```
Aristotle mainnet (chainId 16661): AgentRegistry
0xf1FAaBef1d00Db1a15b7637Dc0d8526449D06Bf9, CompassHub
0xe42fd4F0a3197126fEeF5e6AAfC5Fb8848bBC58b. 3 demo policies
(HELP/Bethune/Hospital) registered on-chain. Also live on Galileo testnet
(16602). chainscan.0g.ai verifies all tx history.
```

(Counted: ~290 chars including spaces — under the 300 cap with room for the canonical alias if needed.)

Revised timeline (BEYOND Expo Macau = Yes)

May 28 IRL demo at BEYOND Expo Macau is now a hard date 18 days from 2026-05-10. F.1 demo video and F.5 X post both move EARLIER so the HackQuest submission lands before travel — no Macau hotel Wi-Fi gambling.

Date	Action
May 10-22	Polish · record F.1 demo video · upload YouTube unlisted
May 23	F.5 — post X tweet using <code>Demo/x-post-final.md</code> template; capture URL
May 24	HackQuest Submit Project (with X URL from May 23) — locks submission before travel
May 26-27	Fly NYC → Macau (US passport visa-free ≤30 days via Macau airport; HKG ferry alternative)
May 28	BEYOND Expo IRL demo showcase — in-person to oG team + judges
May 29 - June 4	Post-event X engagement; Community Award push (10× \$1.3k voted via Discord/X)
June 5	Hackathon deadline (already submitted)

Travel prep checklist

- ☐ US passport valid 6+ months past travel
 - ☐ Book flights NYC → Macau (~\$1200-1800 economy, 18-22hr; price climbs from here)
 - ☐ BEYOND Expo registration:
`https://portal.beyondexpo.com/reg/beyond26/web/#/zh/ticket/mall?track=tk07`
 - ☐ Hotel near Cotai (where BEYOND Expo is held) — book by May 20
 - ☐ Demo gear: laptop + mobile hotspot SIM + offline kiosk fallback build
 - ☐ Printed materials: QR codes → live app + GitHub + whitepaper; one-page handout
 - ☐ Practice demo cold on hotel Wi-Fi on May 27 before Day 1
 - ☐ Confirm oG team booth / session schedule via Telegram before flying
-

Post-submission tracking

After each form lands, append the timestamp + confirmation here:

- ☐ Google Form submitted at: _____ (capture confirmation: `Demo/google-form-confirmation.png`)
 - ☐ HackQuest project entry created at: _____
 - ☐ HackQuest Submit Project filed at: _____ (capture confirmation: `Demo/hackquest-submission-confirmation.png`)
 - ☐ X post URL: _____
-

Why these answers, not others

- **All 3 prize tracks selected on HackQuest** — Per the grand-prize execution plan, Compass is positioned for Grand Prizes (Track 5 win), Excellence Awards (per-category bonuses), and Community Awards (10× \$1.3k via X/Discord engagement). Selecting all three keeps every prize lane open.
- **Both Track 1 + Track 5 on Google Form** — Track 5 (Privacy & Sovereign Infra) is the primary fit. Track 1 (Agentic Infra & OpenClaw Lab) is a secondary fit because C.2 shipped a Compass OpenClaw skill (`compass-eligibility-check`) at `docs/skills/compass-eligibility-check/` .
- **oG components: 5 of 6 selected** — Storage (encrypted vault ciphertext upload), Compute (Phala dstack TDX is oG's TeeML compute path), Chain (AgentRegistry + CompassHub deployed to both Galileo and Aristotle), Agent ID (ERC-7857 stripped soulbound INFT for agent identity), and TEE/Private Sandbox (the entire privacy premise sits on Phala dstack TDX). Skipped oG DA — not used in v1; the audit log is on oG Chain directly.
- **SDKs: TypeScript Storage SDK + Hardhat deployment scripts** — `enclave/` and `app/` use `@0glabs/0g-ts-sdk` for the encrypted vault upload path. Contracts deploy via Hardhat from `contracts/` . The other listed SDKs (Rust, S3-compatible, Go, Web Starter, Compute) are not used in Compass v1.
- **CompassHub as the primary contract** on HackQuest's single-address field — CompassHub is the entry point for the grant-and-receipt flow; AgentRegistry is the dependency. If the field accepts multiple, include both.
- **Tech feedback uses concrete numbers** — the US-funding pain is a real builder-experience signal oG can act on; the ERC-7857 reference-impl note is a constructive ask. Both improve the chance of in-person follow-up at BEYOND Expo.
